EXPERIENCE

Technical Lead (Part-time) <i>Auro AI</i>	Jun. 2026 – Present <i>Valencia, Spain</i>
- Lead the technical development of an AI assistant that reads energy and telecom bills over WhatsApp and switches users to the best tariff available in Spain - Own the back-end architecture of a six-app TypeScript monorepo (REST API, conversational agent on Mastra and Vertex AI, internal CRM) over PostgreSQL, Docker and Google Cloud Platform, released to two servers with zero-downtime deploys and automatic rollback - Set the engineering standard for a team of four (mandatory code review, protected main, 80% coverage gate on new code) and merged over 280 reviewed pull requests since June 2026	
AI & Back-End Developer <i>Grupo Educativo CEU</i>	Oct. 2025 – Jun. 2026 <i>Valencia, Spain</i>
- Developed and deployed GPT-CEU, a generative AI assistant serving the group's three universities over web and WhatsApp, with role-aware routing for students, faculty and staff - Connected language models to institutional data sources through serverless Azure Functions and RAG pipelines, answering with real-time academic information in production	
Museum Guide & Technical Workshop Instructor <i>Museo de Informàtica, Universitat Politècnica de València</i>	Feb. 2025 – Jun. 2025 <i>Valencia, Spain</i>
Designed and delivered technical workshops on robotics, cryptography and programming, and led guided visits on the history of computing for students and general visitors	
Private Tutor <i>Superprof</i>	Jan. 2022 – Jan. 2025 <i>Valencia, Spain</i>
Provided personalized instruction in mathematics, physics, and technical drawing for secondary and pre-university students	

PROJECTS

MonkeyGrab / Local On-Premises RAG System <i>Ollama, ChromaDB, LlamaIndex, Flask, React</i>	2026
- Built a privacy-focused multilingual RAG system for PDFs as a final degree project, with no dependency on external APIs - Implemented hybrid semantic and lexical retrieval with a Flask back end and React web interface	
OCR-to-CRM Automation Pipeline <i>Azure Functions, Document Intelligence, GPT-4, RapidFuzz</i>	2026
- Replaced the outsourced manual digitization of handwritten enrollment forms at a private university with a serverless pipeline that writes straight into the CRM - Combined OCR extraction, fuzzy matching against institutional catalogs and GPT-based validation; running in production at CEU	
Dataset Creator <i>Python, PDF Processing, JSONL, QA Generation</i>	2026
Created a reproducible local pipeline for generating supervised QA datasets from PDFs with language detection and quality controls	

EDUCATION & AWARDS

Universitat Politècnica de València (UPV) <i>Computer Engineer, Computing Specialization</i>	Valencia, Spain <i>Expected 2026</i>
Certifications in Python for Data Science, Linux Fundamentals, SQL and R for Data Analysis, and Mathematical Foundations for Machine Learning	
Inditex Tech Ambassador <i>Selected for a university STEM talent program with Inditex's global technology teams</i>	2026

TECHNICAL SKILLS

Generative AI & LLMs: RAG, fine-tuning (PEFT/QLoRA), LangChain, LlamaIndex, Mastra, Vertex AI, Azure OpenAI, Ollama, ChromaDB, pgvector, Hugging Face Transformers
Machine Learning: PyTorch, TensorFlow, Scikit-learn, OpenCV, Vision Transformers
Back End, Data & Cloud: Node.js, Flask, REST APIs, PostgreSQL, Google Cloud Platform, Azure Functions, Azure Document Intelligence, Docker, pm2, GitHub Actions CI/CD, Linux
Front End: React, Next.js, TypeScript, Tailwind CSS
Programming Languages: Python (advanced), JavaScript/TypeScript, SQL, R, C
Languages Spoken: Spanish (native), English (full professional proficiency, Cambridge B2), Valencian (native, GVA certified)
